\$500,000	2% / trade	~16%	~\$3,864/day	~\$85,000/mo	+166%	+\$830,845
\$500,000	3% / trade	~24%	~\$5,795/day	~\$127,500/mo	+305%	+\$1,526,305

STRATEGY OVERVIEW

How It Works

Session Alpha is a fully automated, rule-based strategy that trades intraday liquidity patterns on major forex pairs (EUR/USD and GBP/USD). The system identifies high-probability reversal zones using session-based price structure — requiring zero discretionary decisions once deployed.

The bot operates during London and New York sessions, targeting up to 2 trades per pair per day with a fixed 2:1 reward-to-risk ratio on every entry. Stop losses are hard and non-negotiable.

Core Principles

- Trades only during peak liquidity windows
- Hard stop-loss on every position — no exceptions
- Fixed % risk per trade (1%, 2%, or 3% of account)
- Max 2 trades per pair per day
- Fully automated entry, sizing, and exit
- Complete trade log generated after every session
- Runs 24/5 — no manual intervention required
- Compatible with any IBKR account
